

Restatement of Amended Claims

18 (Amended). A method for providing on demand remote control of an application program, comprising the steps of:

determining that a user at a first computer system desires remote control over an application at a second computer system;

transporting over network a remote control module to said [second] first computer when demanded by said user, said remote control module enabling said first and second computer system to communicate remotely without pre-installing remote control software at said [second] first computer prior to opening a communication session between the first and second computer; and

executing said remote control module at said [second] first computer to establish a remote control communication between a user interface at said first computer and an application at said second computer.

18 (New). A method for providing on demand remote control of an application program, comprising the steps of:

transmitting a demand that a user at a first computer system desires remote control over an application at a second computer system;

receiving from a network a remote control module onto said first computer after issuing the demand, said remote control module enabling said first computer and a second computer system to communicate remotely without pre-installing remote control software at said first computer prior to opening a communication session between said first computer and said second computer; and

executing said remote control module at said first computer to establish a remote control communication between a user interface at said first computer and an application at said second computer.

~~39~~
20 (New). A system for on demand remote control of an application program operative to execute the method of claim 10.

~~40~~
21 (New). A method for providing on demand remote control of an application
5 program, comprising the steps of:

determining that a user at a first computer system desires remote control over an application at a second computer system;

Sub A'
transporting over a network a remote control module to said first computer when demanded by said user, said remote control module enabling said first and second
10 computer system to communicate remotely without pre-installing remote control software at said first computer prior to opening a communication session between the first and second computer; and

awaiting execution of said remote control module at said first computer to establish a remote control communication between a user interface at said first computer and an
15 application at said second computer.

~~41~~
22 (New). A system for on demand remote control of an application program operative to execute the method of claim 21.
